CEWELD®

4122 HL-Kb

CATEGORY SMAW Stick Electrodes

TYPE High recovery, corrosion resistant stainless steel stick electrode

APPLICATIONS Hardfacing shafts from stainless steel parts, molt repairs, rebuilding pump parts etc. Suitable for plating and joining equal and similar ferritic Cr-steels and cast steels. This alloy is specially suitable for sealing surfaces on

water-, steam and gas-valves, especially for sulphuric gases.

Proper weldings are subject to the recommended heat treatment. The deposit is resistant to seawater, thin **PROPERTIES**

acids and scale resistant in air and oxidizing gases up to 950°C . The weld deposit can be tempered and also can sustain working temperatures up to 450° C. and will offer scale resistance up to much higher temperatures. Preheating is recommended at 150 - 350° C. depending on the thickness of the base metal.

Similar base metals should be pre-heated at 300° C to 400° C.

A 5.4: ~E 430HMo-26 **CLASSIFICATION AWS**

EN ISO 3581-A: EZ 17 1 R 52

DIN: W.Nr. 1.4122

8555: E6-UM-50-CP DIN

SUITABLE FOR Hardfacing rollers that needs to have corrosion resistance, shafts, valve sealings for water, gas and steam

equipment etc.
