Alloy X

CATEGORY GMAW-GTAW Solid wires

PROPERTIES Alloy X is a nickel- chromium-iron-molybdenum alloy that possesses an exceptional combination of oxidation

resistance, fabricability and high-temperature strength. It has also been found to be exceptionally resistant to stress-corrosion cracking in petrochemical applications. X alloy exhibits good ductility after prolonged exposure at temperatures of 1200, 1400, 1600F (650, 760 and 870C) for 16,000 hours. Suitable for joining

and cladding Nickel alloys, stainless steel, carbon steel and low alloyed steels. UNS: N06002

CLASSIFICATION AWS A 5.14: ER NiCrMo-2

EN ISO 18274: DIN: W.Nr. 2.4665 DIN 1736:

SUITABLE FOR Alloy HX, X, Nickel alloys, stainless steel, carbon steel and low alloyed steels. UNS: N06002
